Concert Ticket Selling Website

by Pourya Mohammadi

Project Vision:

Users can see the available seats in the concert hall, choose their preferred row and seat number, and purchase tickets based on the seat price. The ticket prices may be different depending on the row and location of the seats.

Target Audience:

Concert Attendees: People who want to find concerts, choose their seats, and buy tickets online.

Concert Organizers**:** People or companies that organize concerts and need to manage ticket sales and seating arrangements.

System Administrators**:** People who manage the website, add concerts, set ticket prices, and monitor orders.

Ticket Sales Staff: Employees who need to check ticket information and manage customer bookings.

Ticket Serial Check: Employees should Verify and activate Serial for authorizing the Tickets.

Core Features:

As a user, I want to create an account and log in so that I can manage my ticket purchases.

As a user, I want to view a list of upcoming concerts so that I can choose an event to attend.

As a user, I want to search for concerts by name, date, or artist so that I can find my preferred concert more easily.

As a user, I want to view the details of a concert, including its date, time, location, and artist information.

As a user, I want to see a seating map of the concert hall so that I can understand the location of each seat.

As a user, I want to select a specific row and seat number so that I can choose where I want to sit.

As a user, I want to see the price of each seat before selecting it so that I can choose a seat based on my budget.

As an administrator, I want to set different prices for different rows or seating sections so that better-located seats can have higher prices.

As a user, I want to see which seats are available, reserved, or sold so that I do not select an unavailable seat.

As a user, I want the system to prevent other users from purchasing the same seat while I am completing my booking.

As a user, I want to review my selected seats and the total price before confirming my purchase.

As a user, I want to pay for my tickets online so that I can complete my purchase without visiting a ticket office.

As a user, I want to receive a digital ticket after successful payment so that I can use it to enter the concert.

As a user, I want to view my previous and current orders so that I can check my ticket information whenever I need it.

As an administrator, I want to add, edit, or remove concert information so that the website always shows updated events.

As an administrator, I want to manage the seating layout and assign seat numbers to each row so that the seating plan matches the concert hall.

As an administrator, I want to view the number of sold and available tickets so that I can monitor ticket sales.

As an administrator, I want to view orders and payment statuses so that I can track completed and unsuccessful purchases.
